

Social Media & Mental Health Analysis Report

Generated on: 2026-01-20 23:16

1. Machine Learning Insights (Linear Regression)

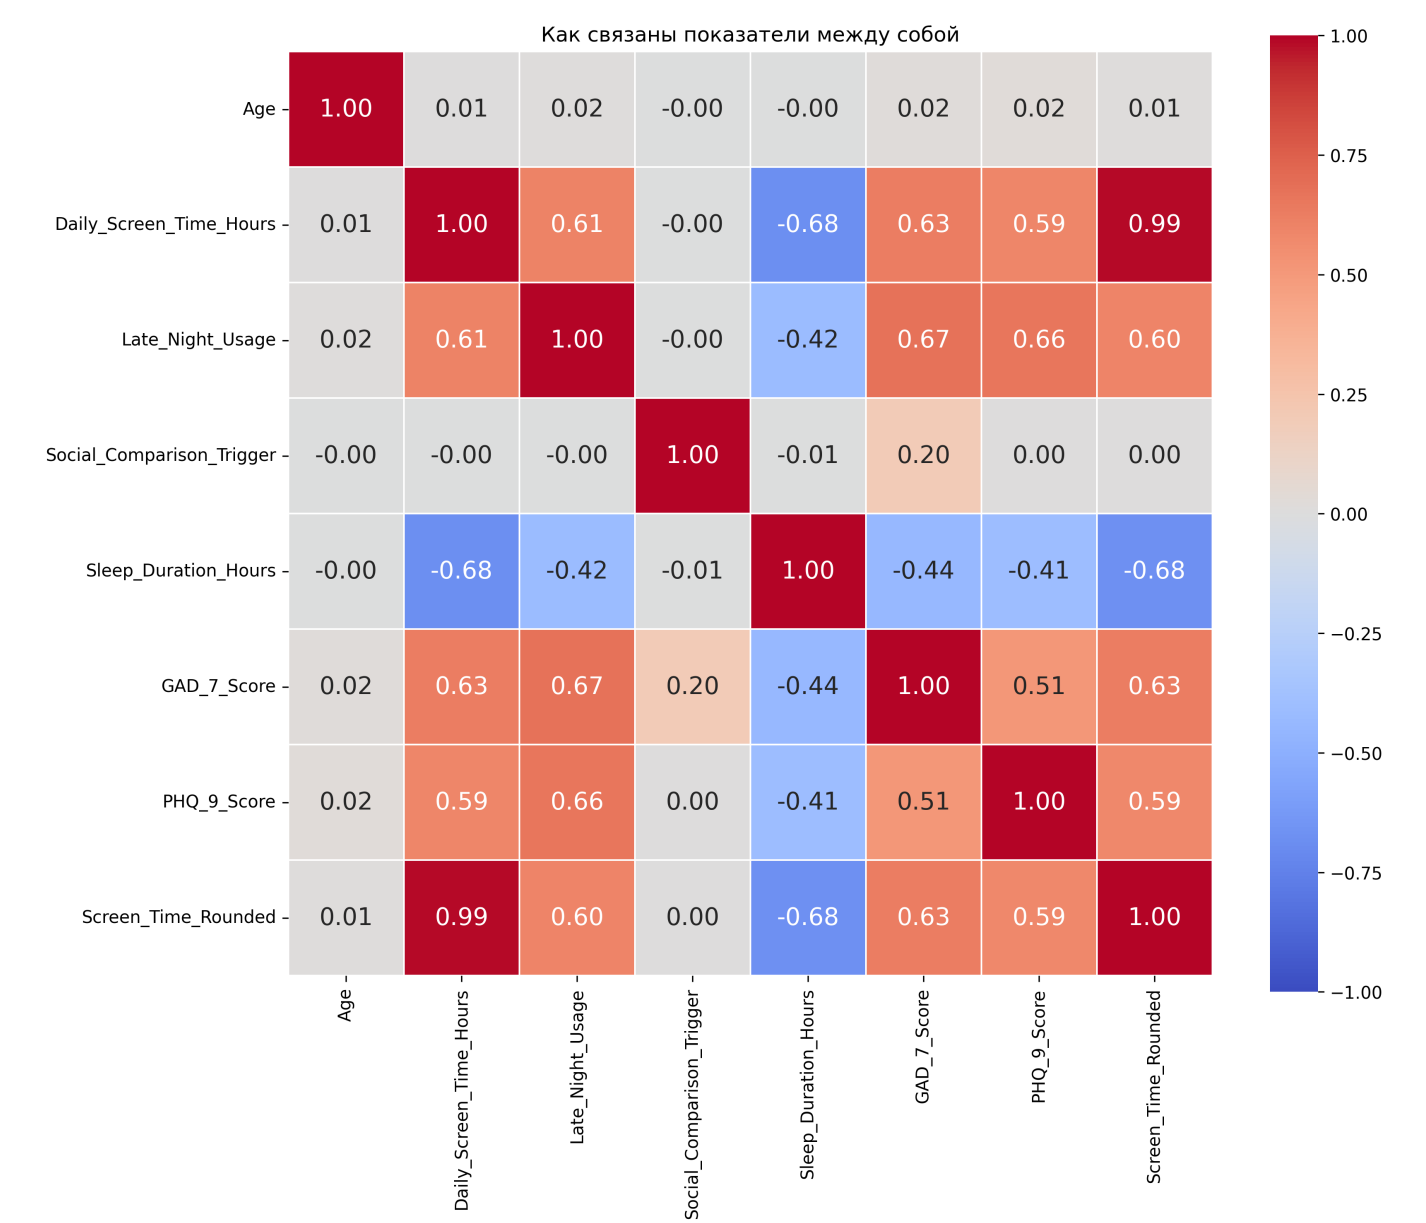

Model Performance (R-squared): 0.39

Screen Time Coefficient: 1.24

Sleep Duration Coefficient: -0.08

Interpretation: For every additional hour of screen time, GAD-7 score increases by 1.24 points, while each hour of sleep changes it by -0.08 points.

2. Correlation Heatmap

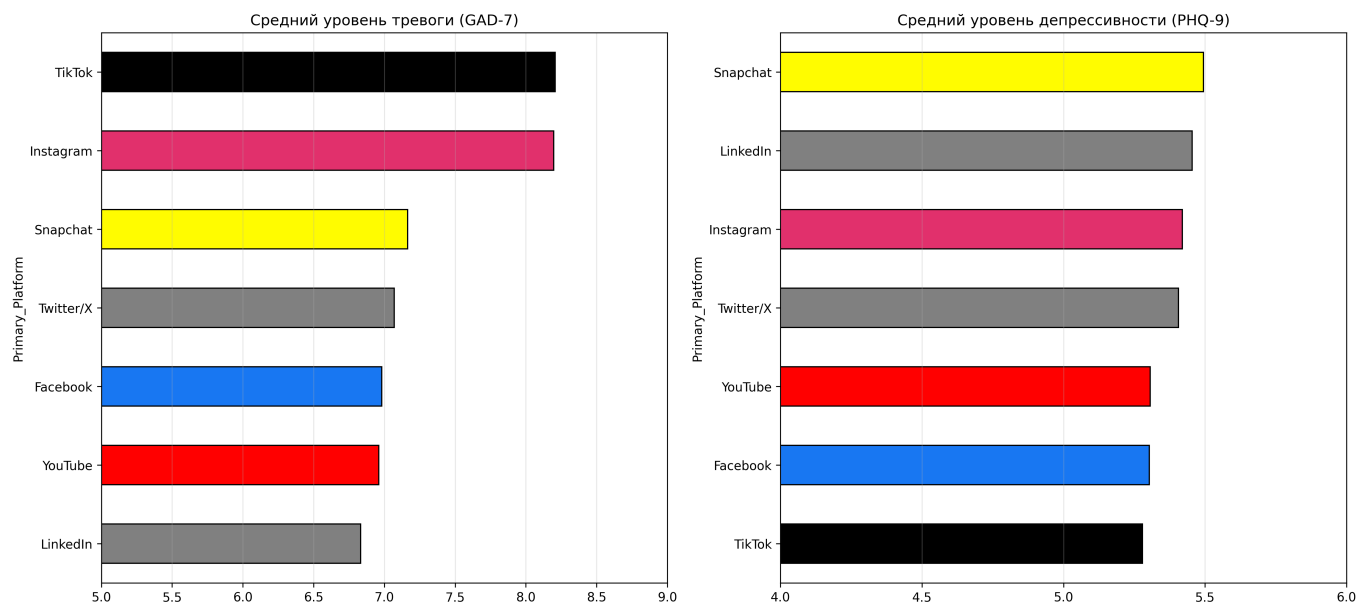

This heatmap shows relationships between variables. High correlation between Screen Time and Anxiety indices is observed.
